Getting Started

1

Choose Your Plan

Browse Weekly, Monthly Wellness or Monthly Pro right in the app, and pick the meals-per-day that fits your goal.

APP & WEB

2

Pay & Tell Us About You

Complete payment, then share your food preference, health goal and delivery address so our kitchen can plan around you.

2 MINUTES

3

Get Approved & Get Your Login

Our team reviews and activates your membership, and sends your app login on WhatsApp.

SAME DAY

Your Premium Card

A live "Meals Remaining" balance, your member code, and validity — right on your home screen.

MP-0001

Your Daily Meal, Confirmed

Premium → Elite

Log In With Your WhatsApp Details

WhatsApp Ask

We message you every day asking if you want today's meal.

Reply by 11 AM

Tap YES or NO right on WhatsApp — that's it.

Or Confirm In-App

Missed WhatsApp? Confirm in the app until 1 PM.

Fresh & Delivered

Confirmed meals are cooked fresh and delivered to you.

Two Ways to Confirm — Same Meal, Same Kitchen

A WhatsApp reply and an in-app confirmation both do the exact same thing: they tell our kitchen to prepare your meal for the day and update your Meals Remaining balance. Use whichever is easier for you — you never need to do both.

Didn't Reply In Time?

No worries — that day is simply marked skipped. Nothing is charged, and we'll ask again tomorrow.

FOR STAFF & MANAGERS

Admin Operations Manual

Everything the Proti Bowls team needs to run the Dining and Subscription operations from the Admin Panel — orders, kitchen displays, subscription members, WhatsApp automation and push alerts.

01	Roles & Access	04
02	Dining Orders & Kitchen Display	05
03	Subscription Members	06
04	Subscription Kitchen	07
05	Daily Meal Confirmation Cutoffs	08
06	WhatsApp & Push Notifications	09
07	Reports & Troubleshooting	10

Who Can Do What

Every staff login has a role, and the Admin Panel only shows what that role is allowed to touch. Roles are set once by an admin/developer when the account is created and cannot be changed by the staff member themselves.

Role	Access
admin	Full run of both Dining and Subscription operations, except the developer-only Subscription Settings page.
developer	Everything admin has, plus Subscription Settings (WhatsApp credentials, templates, cutoff times).
gym_manager	Dining side only — Orders, Menu, Customers, Kitchen Display, Service Hours. No subscription section, no Staff page.
sub_manager	Subscription section only — Members, Approvals, Manual Entries, Subscription Kitchen. Confined away from the Dining side.
gym_chef	Dining Kitchen Display only.
gym_delivery	Gym Delivery / dispatch screen only.
subs_chef	Subscription Kitchen only.
subs_delivery	Subscription Delivery / dispatch screen only.

An unrecognized or missing role is signed out automatically rather than shown any live screen — access is allow-listed, not blocked by exception.

Kitchen Display (Orders)

Every dine-in, takeaway and delivery order lands on the Kitchen Display as a card, oldest first. A card moves through four stages: **Pending** → **Confirmed** → **Preparing** → **Prepared/Completed** (delivery orders stop at Prepared and move to Gym Delivery for agent assignment).

The New-Order Alert

A new pending order rings the kitchen — the alert **loops continuously with no timeout** and only stops the moment the chef taps **CONFIRM** on that order. This is deliberate: a chef who has stepped away should come back to a still-ringing kitchen, not a silently missed order.

If several orders arrive together, the alert keeps ringing until every pending order on screen has been confirmed — not just the first one.

Manual Refresh & Auto-Refresh

The board polls every 15 seconds automatically. Use the refresh icon for an immediate pull, or the Auto ON/OFF toggle to pause polling entirely (e.g. while reviewing a single order).

Approvals, Members & Manual Entries

The Subscription → Members screen has three tabs:

- **Approvals** — new sign-ups awaiting review. Approving creates the member's app login and activates their plan.
- **Members** — every active/paused member, with plan, meals-remaining balance and quick actions (remove, reset password, edit details).
- **Manual Entries** — a lightweight log for offline leads or walk-in payments that should **not** become a real member (no login is created, no WhatsApp automation starts). Each entry records a name, phone, plan of interest, amount and notes, and is synced nightly to a Google Sheet for bookkeeping — entries stay visible here permanently even after they sync.

Adding a Real Member Manually

Use the **ADD MEMBER** button (Members tab) for an offline/cash payment — it creates a full member account (login + active plan) the same as a self-service sign-up. Their plan starts the **next day** by default, unless marked as a developer TEST member (which starts the same day, for exercising the reminder cycle immediately).

Manual Entries and "Add Member" are intentionally different: use Manual Entries for a lead or a payment you just want on record; use Add Member only when you're actually onboarding someone as a paying subscriber.

Subscription KDS

Once a manager pushes a day's confirmed meals to the kitchen from Today's Meal, they appear here sorted by priority, with a live headcount split by veg/non-veg and morning/evening preference.

New-Meal Alert

Just like the main Kitchen Display, a freshly-arrived meal rings an alert that loops until the chef marks it **Prepared** — switching the date filter never falsely re-triggers it.

Two Tabs

- **To Prepare** — everything still being cooked.
- **Prepared** — done and ready, moved out of the working queue.

The Three-Stage Cutoff

Every day's meal question follows the same same-day cycle, with three fallback stages so nothing gets missed:

11 AM

WhatsApp reply
closes

1 PM

In-app confirm
closes

6 PM

Manager override
closes (from 11 AM)

A member can reply YES/NO on WhatsApp **or** confirm in the app — both do the identical thing (update the meal status and adjust their meals-remaining balance). After 1 PM, only Survey Responses' manual CONFIRM/MARK NO buttons can still act on an unanswered row, and only until 6 PM. Anything still unanswered by then is auto-resolved to skipped by the nightly cutoff sweep.

All three paths — WhatsApp, in-app, and manual override — record identically in `meal_confirmations` and move the same meals-remaining balance, so the count members see on their Premium Card is always accurate no matter which path was used.

Automation & Notifications

WhatsApp Settings (Developer)

Credentials, message templates and the send/cutoff times live under Subscription Settings. A manager can also trigger **SEND TONIGHT'S QUESTION NOW** to send immediately to all active members or a hand-picked selection, regardless of the scheduled time.

Push Notifications

The Admin Panel can send a real phone notification — one that arrives even if the browser tab is closed — for two events:

- **New order received** — the instant a dining order is placed.
- **Meal confirmed** — the instant a member replies YES on WhatsApp, sent to admins/developers/subs managers.

To start receiving these, simply log in and accept the browser's notification permission prompt once — no separate setup. Each browser/device you log in on registers itself independently.

If you dismissed the permission prompt, notifications for that browser stay off until you clear the site's notification permission and log in again.

Exports & Common Questions

Google Sheets Exports

Orders, subscription meal confirmations and Manual Entries all sync nightly to Google Sheets for bookkeeping — orders and meals are pruned from the database once safely synced; Manual Entries stay visible here permanently.

Quick Troubleshooting

- **"0 of 0 done" on a WhatsApp send** — check the target members' plan start date; a plan that starts tomorrow is correctly excluded from today's send.
- **Manual confirm button missing on Survey Responses** — it's outside the 11 AM–6 PM window; this is expected, not a bug.
- **No push notification received** — confirm the browser's notification permission is granted for this site, and that you're logged in on that device.
- **Kitchen alert won't stop ringing** — there's still a genuinely unconfirmed order/meal on screen; confirm/mark it prepared to silence it.
